CHANDIRASEGARAN I

Software Engineer – Java, Spring Boot & Microservices

Bengaluru, India | +91-9442019821 | chandirasegaransegar@gmail.com | linkedin.com/in/chandirasegaran | github.com/Chandirasegaran

SUMMARY

Backend Software Engineer with 2.5+ years building scalable, enterprise-grade services in Java, Spring Boot and Microservices, plus high-performance Rust services. Built REST APIs, an API gateway, multi-tenant distributed systems and optimization engines on PostgreSQL, MySQL and MongoDB, with a focus on design patterns and testable, maintainable code.

TECHNICAL SKILLS

- **Languages:** Java (8/11/17), Rust, Python, SQL, TypeScript, JavaScript, C++
- **Backend:** Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Hibernate, Microservices, REST APIs, Axum, Tokio
- **Data:** PostgreSQL, MySQL, MongoDB (NoSQL), Schema Design, Indexing, Transactions
- **Cloud & DevOps:** AWS (EC2, S3), Docker, CI/CD Pipelines, Git, Linux, Bash
- **Engineering:** Distributed Systems, API Gateway, Multi-Tenancy, Concurrency, Design Patterns (GoF), OOP, Data Structures & Algorithms, Unit & Integration Testing, OpenAPI, Distributed Tracing

PROFESSIONAL EXPERIENCE

Regere LLP – Software Engineer (Junior Product Hacker) **Dec 2025 – Present**

- **Load Optimization Engine:** Engineered a multi-tenant 3D truck/container load-planning microservice in Rust (Axum, Tokio, PostgreSQL, AWS S3) with 21 REST endpoints, combining fleet generation, Best-Fit Decreasing bin packing and center-of-gravity balancing to return item placements and LIFO load sequences.
- **Stacking & CG Repair:** Delivered stackable-cargo loading and CG repair (+1,600 LOC) using permutation and swap-based rebalancing, verified by ~180 unit and integration tests.
- **Yard Recommendation Service:** Built transport-unit stacking for a stateless Rust service that ranks storage slots in a 3D yard grid via constraint validation and rule-based scoring; added OpenAPI docs and W3C distributed tracing.
- **Central API Gateway & IAM:** Designed a centralized gateway for authentication, routing and service orchestration across applications; implemented RBAC with permissions, resource ownership and session management.
- **Enterprise Platforms:** Built license lifecycle management (generation, activation, renewal) and manufacturing-operations features with Next.js, Node.js and PostgreSQL, including Excel bulk upload and RSQL filtering; owned code review and testing.

Highbrow Technology Inc. – Associate Software Engineer **Feb 2024 – Oct 2025**

- **Email Campaign Microservices:** Designed and deployed Spring Boot microservices with REST APIs, Spring Data JPA/Hibernate and Spring Security on AWS EC2 with CI/CD, improving scheduling efficiency and delivery reliability by 25%.
- **Online Test Platform:** Built a scalable online assessment platform (React, Next.js) on secure backend REST APIs, reducing development time by 25%.
- **Technical Leadership:** Led the AI Video Annotation project across 7 teams (30+ members) in Agile/Scrum, defining SOPs, resolving blockers and delivering every milestone on time.
- **Cloud & Delivery:** Cut deployment time by 30% with Git, Docker and CI/CD pipelines; provisioned and tuned AWS EC2 GPU instances with performance monitoring.

EDUCATION

Integrated Master's Degree in Computer Science – Pondicherry University **June 2024**

GPA: 8.62/10
